WEATHER SYNOPSIS BY REGION

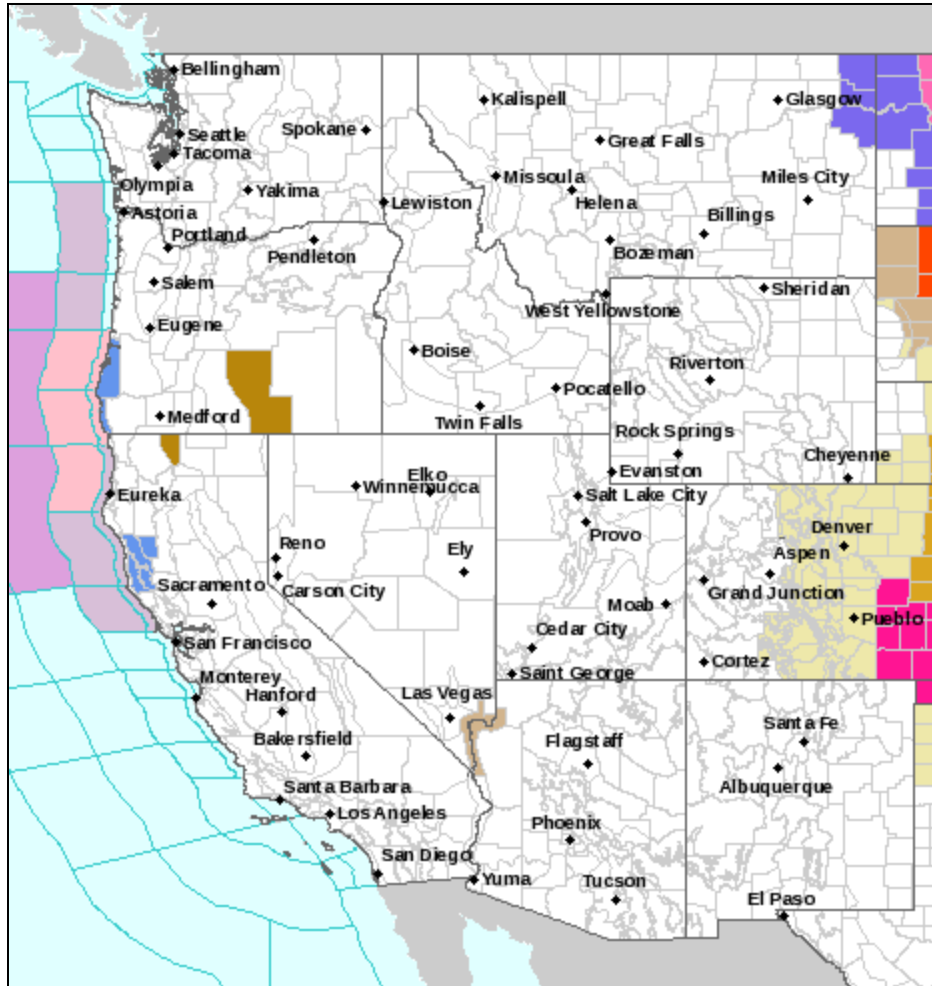

NORTHERN CALIFORNIA

The unsettled weather pattern will continue through the middle half of the month. This means periods of cool and wet weather. Ridging will provide drier conditions today. Wind speeds will be light with normal humidity readings. The ridge will break down on Wednesday and lead into an unsettled weather period through at least the earlier half of next week. Snow levels will initially be higher Wednesday through Saturday but transition to lower elevations Sunday into next week due to a stronger Pacific storm system. The Sacramento Valley will be the least favored in terms of precipitation due to the type of flow the models are projecting. The higher, west facing slopes will be favored the most. Temperatures will generally be near normal during a large portion of this period but trend below normal by early next week. Humidity will trend higher during the unsettled period with periods of stronger S to SW winds.

SOUTHERN CALIFORNIA

A weak ridge of high pressure over California will bring significant warming along with minimum humidity in the teens to most of the region through Wednesday. Local northeast winds of 10 to 20 mph with gusts to 35 mph will surface across the mountains and below the canyons and passes of Southern California through this morning. Zonal flow will bring a cooling trend and an increase in humidity to the region Thursday through this weekend. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the wind prone mountain and desert areas Thursday through this weekend. Scattered showers with light rainfall totals will move across the area this weekend.
